Cleaning Code: WS - For water based stains, use water based cleaning agents.
 For oil based stains, use solvent cleaner.

Sherpa & Shire are remarkably durable and cleanable upholstery fabrics. Constructed exclusively with Marquésa® Lana yarns, which gives them inherent strength, these fabrics have set an unsurpassed standard for performance and abrasion ratings and are nearly impervious to damage.

The integration of fiber and finish utilized in creating Marquésa® Lana gives this fabric its extraordinary wearability and distinctive stain resistant properties. Color that goes all the way through to the fibers ensures that color won't 'wear off'. With proper maintenance, Sherpa & Shire fabrics will retain their new look for years with no fear of tears, yarn breaks, pilling or snagging under normal use.

WARP SPEED® PATTERNS AND COLORS COMPRISE ABSECON'S QUICKSHIP PIECE PROGRAM. These items are readily processed to meet your specified fire code at an additional charge. Healthguard® Antimicrobial Treatment and other performance finishes are also available at an additional charge. Please call or email info@absecon.com for further details. Warp Speed® is a registered trademark of Absecon Mills, Inc.

Absecon Mills is focused on being a responsible corporate entity and we are continually striving to find ways to help preserve our environment, increase energy efficiency and reduce waste. We believe this is more than a goal... it is a necessity and a key obligation of every responsible manufacturing company. Absecon's use of polyolefin yarns in this product represents a mode of manufacturing that prevents damage to the environment and actually helps improve it by utilizing waste products from gasoline manufacturing. It is a by-product of post-industrial waste and its manufacture produces no waste product. It is a low temperature product, so it requires less energy to produce than other types of yarn. It is inherently resistant to stains and wear, eliminating the need for after market finishes, such as Teflon®. It is recyclable and unique in its utilization of conservation methods from inception to disposal.
